

# Fire Protection Water Tanks

## Discover the Difference with Pioneer Fire-Protection Tanks

Combine your domestic and fire-water storage in one cost-effective, space-efficient tank.

Pioneer fire-protection tanks are designed to meet or exceed NFPA 22 standards for fire-water storage and come with a complete set of engineer-approved drawings.

Made of Zincalume® steel that has been proven to withstand fire immersion and resist corrosion, ensuring the safety of your water supply in even the worst emergencies.

The exclusive five-layer AQUALINER® Fresh is approved to NSF 61 standards for potable water.

Pioneer Water Tanks can be configured for high-wind locales, seismic conditions, and heavy industrial zones with additional accessories that meet different compliance needs. Pioneer Water Tanks are delivered to and built directly at the project site without the use of cranes. This reduces the overall project cost and allows for the most flexibility in adapting to the site's installation requirements.

Optional anti-vortex and fire-fighting adapters ensure water is always available for quick access during a fire emergency.

Pioneer offers a wide variety of water storage options with gross capacities ranging from 3,000 to 700,000 gallons.

Pioneer tanks are backed by our industry-leading 20-year warranty, so you can rest easy knowing you have a fire-protection solution that will last.
